--- TISSUE SPECIFULIAR LOCATION: Nuclear (Probable).

--- TISSUE SPECIFULIAR LOCATION: Nuclear (Probable).

--- TISSUE SPECIFULIAR LOCATION: Nuclear (Probable).

--- TISSUE SPECIFULIY: Expressed at low level in normal immunohapatopoietic tissues, including the fetal liver. Expressed to my subset of myeloid Leukemia cell lines, with the highest excression seen in those with a megakaryocytic-erythroid phenotype.

--- SIMILARITY: Selongs to the TALE/MEIS homeobox family.

--- SIMILARITY: Contains 1 homeobox domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PROSITE; PS00027; HOMEOBOX_1; FALSE_NEG.

```

	CC -:- FUNCTION: Possible transcription activator involved in early cembryonic development. Probably binds to the DNA sequence 5'-TGAC-CC 3'- SUBCELLUAR LOCATION: Nuclear (Probable). CC -:- SUBCELLUAR LOCATION: Expressed mainly in embryonic tissues. Weakly detected in stems and hypocotyl. CC -:- DEVELOPMENTAL STAGE: First expressed in the embryo proliferation crage, increases during early somatic embryo development and decreases thereafter. CC decreases thereafter. CC -:- SIMILARITY: Belongs to the TALE/KNOX homeobox family. CC -:- SIMILARITY: Contains 1 homeobox domain.

"Isolation and characterization of two knotted-like homeobox genes
                                                                                                                                                                                                                                                                    -:- SUBCELLULAR LOCATION: Nuclear (Probable).
-:- TISSUE SPECIFICITY: Expressed in developing lateral organs and developing ovaries in Flowers.
-:- SIMILARITY: Belongs to the TALE/KNOX homeobox family.
-:- SIMILARITY: Contains 1 homeobox domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         355

-I- FUNCTION: May play a role in meristem formation and/or maintenance. Overexpression causes the hooded phenotype characterized by the appearance of an extra flower of inverse characterized by the appearance of an extra flower of inverse polarity on the lemma. Binds to the DNA sequence 5'-TGAC-3'.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                         Description

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/note="vector: pSPORT; Site 1: Not!; Site 2: Sali; CDNA
library was derived from unireated rosette tissue from
Arabidopsis thaliana, Columbia Col-0, at 4 - 7 weeks.
Plants were grown in 1::1, pear moss/vermiculite/perlite
soil at 22 deg. C +/- 3 deg. C under constant light, and
watered with fertilizer. CDNA synthesis was initiated
using a Not!-0igo(dT) primer. Double-stranded cDNA was
blunted, ligated to Sali adaptors, digested with Not!,
size-selected, and cloned into the Not! and Sali sites of
the pSPORT vector."

An Arabidopsis full-length CDNA library was constructed essentially as reported previously (Seki et al., 1998). cDNA cleaved with BamHI and XhOI was ligated to modified Lambda FLC-1 vector (Carninci et al., submitted for publication) disested with BamHI and Sall. This clone is in a modified pBluescript vector. Please visit our web as the (http://www.gsc.riken.go.jp/e/plant/index_e.html) for further
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1613
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1673

The CDNA was directionally ligated into the Unizap XR vector from Stratagene and packaged using Gigapack III Gold packaging extracts. Plasmids containing cDNA inserts were excised from the recombinant lambda-Zap phage using Ex-assist helper phage and propogated in XLOLR cells."	Query Match Best Local Similarity 69.9%; Pred. /Jab host="Westor: pBRcDMASfiab; The library was constructed from 10 different sources of RNA from a single genotype. Separate cDNAs were generated using primers that incorporated unique 5° and 3' tags to distinguish each source of RNA. CDNAs were then pooled, size-fractionated, directionally cloned into a custom medium-copy vector and transformations made with four size classes to minimize size bias. Details of each source of RNA and library construction can be obtained at http://cgpdb.ucdavis.edu/TAG_INBEG_ERGNATIONERS pre-fertilized TAG_ERGG_ERGNATIONERS pre-fertilized TAG_ERGG_ERGNATIONERS pre-fertilized TAG_ERG_EGGTTGAACGG"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1201
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ä

and Shinozaki, and Shinozaki, and Shinozaki, and Shinozaki, and Shinozaki, and Shinozaki, and Shinozaki, and Shinozaki, and Shinozaki, sexi brobists sexi mercaki sexi plant Functional Genomics Research Group RIKEN Genomic Sciences Center 3-1-1 Koyadai, Tsukuba, Ibaraki 305-0074, Japan 7-1: 804dai, Shinozaki 4-1: 198-16-1960 Email: meski@rtc.riken.go.jp An Arabidopsis full-length cDNA library was constructed essentially as reported previously (Seki et al., 1998). cDNA cleaved with BamHI and Khol was ligated to modified Lambda FLC-1 vector (Carninci et al., submitted for publication) digested with BamHI and Sall. This clone is in a modified pBluescript vector. Please visit our web as the (http://www.gsc.riken.go.jp/e/plant/index_e.html) for further

This sequence is recovered from the left border of the T-DNA. It
indicates an insertion within the locus defined by clone 726P21.
The sequences are generated at the MPI for Plant Breeding Research
in the context of the GABI-Kat project. GABI-Kat is part of the
German Plant Genomics program designated 'GABI'. Information on
line availability can be found at:
http://www.mpiz.koeln.mpg.de/GABI-Kat/.
